(54) Title: REFLECTIVE POLARIZER WITH BRIGHTNESS ENHANCEMENT

(57) Abstract

A multiple layer reflective polarizer (12) is described. This element is placed between an optical cavity (24) and an LCD module (16) to form an optical display. The reflective polarizer reflects some light into the optical cavity (24) where it is randomized and may ultimately emerge with the correct polarization to be transmitted out of the display.
